Mateusz Małecki
web developer

2015 - 2018	**University of the Arts Poznan** Bachelor Degree in Painting
2019 - now	**West Pomeranian University of Technology Szczecin** Information Technolgy external studies
2014 - 2020	**Freelance work** logo design, posters, oil and acryll paintings
2017 - 2019	**IKEA Poznan** salesman
2020	**React Native for Artur Dróżdż** worked on internationalisation of Android app: Record scanner/detector - Vinyl & CD recognition

It's really inspiring for me, that when you work as a programmer, you become an architect of world that is a great part of everyone's life. I would like to learn as much as possible and confront challenges. I recently had first expiriance with professional remote work and code reviews.

TECHNOLOGIES

CODING

HTML5

CSS / SASS

JavaScript ES6

React

jQuery

C++

DESIGN

Adobe Photoshop

Adobe Illustrator

Adobe XD

SVG/SVGanimations

I KNOW BASICS OF

Node.js   Express.js

TypeScript

React Native

Redux

PostgreSQL

Docker

OTHER TOOLS I USE

Yarn

Git/Github/Gitflow

Gulp

Linux/terminal

COMMUNICATION

LANGUAGE

Polish English(very good written and spoken)

INTERPESONAL SKILLS

Resolving conflicts
Open-mindedness
Adaptable
Able to work under pressure
Relatioship building

INSTRESTS

I like reading Jean Baudillard or GIlles Deleuze. Listen to post-punk, sometimes jazz. Watching horror movies with bad score on IMDb.

I am respectful, honest and hard-working person who is looking for new opportunities to test his skills.

DEVELOPER EXPERIENCE

REMOTE

React Native

Android App: Record scanner/detector - Vinyl & CD recognition

Employer: Artur Dróżdż

Working for Artur was a real pleasure. I've learned a lot in terms of practical use of Git and had my first real life experience with onboarding process. Remote character of the job was excelent to use my reaserch skills and to face programming task with deadline and collective work. I've really liked the expirience.

My task was to go through all views of the app and swap every string for properly named variable. It was later used for user translation.

I used Android Studio Emulator and we used Gitflow for version control.

PERSONAL PROJECTS

Trifto

Idea for this project came from my girlfriend's hobby- trift shopping. The app is going to be a platform build mainly by users. It'll gather all necessery info about second hands in the closest area e.g. opening hours, price per kg and localisation displayed on a map.

I'm building frontend with React. Backend with node.js and express.js. I chose database to be PostgresSQL having in mind that the project will be deployed on Heroku. In development I use Docker for creating database virtual environment. I am also using Mapbox GL API for map rendering and addons like pins and popups. Decided on Mapbox because It fits my UI idea, it's customisable and free up to a point.

BookSearch

Simple Bootstrap UI and intresting Google API. This web app takes user input and forms an API query.. Returned JASON data is displayed on the page as a list with abbility to add a position to collection.

Personal portfoio

While creating my present portfolio site I learned a lot about countless posibilities that vector graphics and SVG animations bring to the table.
